# SOLID WOOD COUNTERTOPS

## FINGER-JOINTED BUTCHER BLOCKS

**OWEN's Butcher Blocks** are a stunning addition to any project. They are as appealing as they are practical. It is one of the most popular materials of countertops throughout the world. The species we use - birch, acacia and rubber wood - are slow-growth, closed grain hardwoods harvested from sustainable forests. The countertops are known for their ease of sanding, finishing, and clean look with a consistent color.

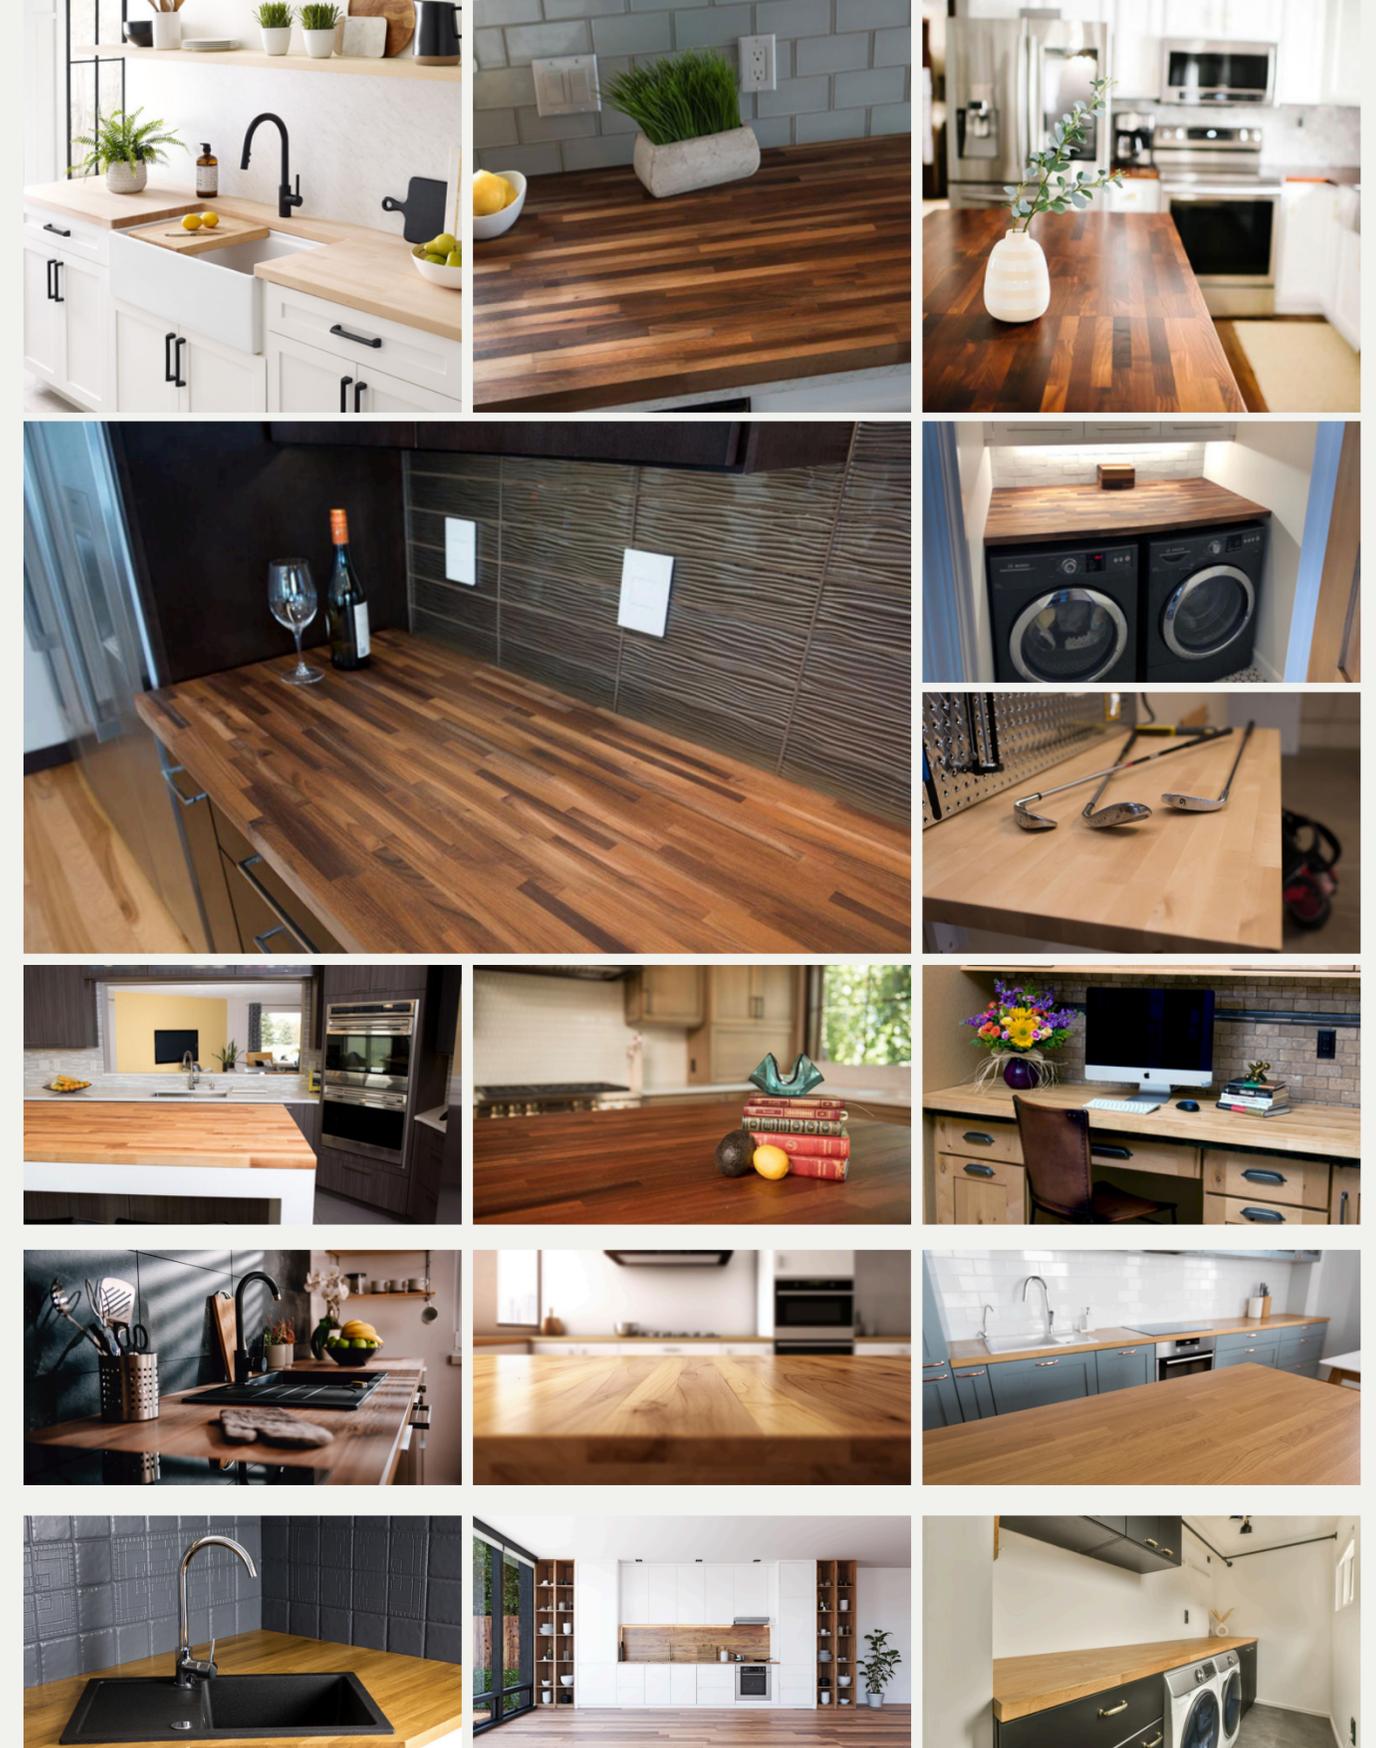

**Owen's countertops** are made of solid wood staves which are finger jointed and edge glued for a classic butcher block look.

A variety of species are available so you can pick a color and style that works for your space. The countertops are sold unfinished, giving you freedom to customize your piece. Remember that wood is a product of nature. The allure of a pure wood product is that no two grain patterns, textures or colors are identical.

Wood is affected by soil contents, climate, growth patterns and many other factors. These wonderfully unique features will ensure a one of a kind look for your remodel.

Differences in grain, coloring or mineral streaking, as it occurred in nature, will not be considered a defect or reason for a replacement. Wood will also change with time, gradually responding to its environment, and aging with beauty.

WE PRODUCE THE BEST  
BUTCHER BLOCKS, IN SEVERAL  
DIFFERENT HARDWOODS, SUCH  
AS BIRCH, ACACIA AND  
RUBBERWOOD

# BIRCH

## BUTCHER BLOCKS

# The Kitchen Cabinets Market

**A \$17.1 BILLION MARKET  
WITH A CAGR OF 6.3%**

Kitchen cabinets are an essential part of any home renovation project, and the market for kitchen cabinets in the USA is large and growing. The kitchen cabinet market is expected to reach \$17.1 billion by 2025, growing at a CAGR of 6.3% from 2020 to 2025.

The demand for kitchen cabinets is primarily driven by the growth in the real estate sector and the increasing preference for modern and modular kitchen designs.

The market for kitchen cabinets in the USA is segmented based on material, product type, and distribution channel. The most commonly used materials for kitchen cabinets are wood, laminates, metal, and glass. Wood is the most popular material, accounting for the majority of the market share. Product types include stock cabinets, semi-custom cabinets, and custom cabinets. Stock cabinets are the most commonly used type, as they are readily available and cost-effective. Semi-custom and custom cabinets are more expensive but offer greater flexibility in design.

The distribution channels for kitchen cabinets in the USA include specialized kitchen and bath retailers, home centers, and e-commerce platforms. Specialized kitchen and bath retailers account for the majority of the market share, as they offer a wide range of products and services, including installation and design. Home centers are also significant players in the market, offering a range of cabinets and accessories for DIY enthusiasts. E-commerce platforms are also gaining popularity, as they offer convenience and competitive pricing.

WE BRING ONE OF  
THE LARGEST AND  
MOST MODERN  
KITCHEN CABINETS  
FACTORIES IN ASIA  
DIRECTLY TO THE  
US MARKET

# WHY YOU SHOULD IMPORT CABINETS FROM VIETNAM?

The kitchen cabinets market in the USA is highly competitive, with a large number of players operating in the market. As a result, many companies are looking for ways to reduce costs while maintaining quality. One option that has become increasingly popular is importing kitchen cabinets from Vietnam. In this article, we will explore the advantages of importing kitchen cabinets from Vietnam into the USA.

Firstly, one of the most significant advantages of importing kitchen cabinets from Vietnam is cost savings. Labor costs in Vietnam are lower than in the USA, and as a result, manufacturing costs are significantly lower. This means that importing kitchen cabinets from Vietnam can result in significant cost savings, which can be passed on to consumers.

Secondly, the quality of kitchen cabinets produced in Vietnam is excellent. Many manufacturers in Vietnam use modern equipment and follow international standards for quality control. As a result, the finished products are of high quality and meet or exceed the standards of the US market. This means that importing kitchen cabinets from Vietnam does not necessarily mean compromising on quality.

Thirdly, importing kitchen cabinets from Vietnam can be a time-efficient process. Many manufacturers in Vietnam have experience in exporting to the USA, and as a result, they are familiar with the logistics and regulatory requirements of the US market. This means that the lead time for importing kitchen cabinets from Vietnam can be relatively short, which can be beneficial for companies that need to meet tight deadlines.

Fourthly, importing kitchen cabinets from Vietnam can provide companies with access to a wider range of materials and designs. Vietnam has a rich supply of natural resources, including bamboo and other hardwoods, which can be used in the production of kitchen cabinets. Additionally, many manufacturers in Vietnam are highly skilled in traditional woodworking techniques, which can result in unique and stylish designs.

Finally, importing kitchen cabinets from Vietnam can help companies to diversify their supply chain. Relying on a single supplier can be risky, as disruptions such as natural disasters or political instability can impact the supply chain. Importing kitchen cabinets from Vietnam can help companies to spread their risk and ensure that they have access to a reliable supply of high-quality products.

In conclusion, importing kitchen cabinets from Vietnam into the USA can provide companies with a range of advantages, including cost savings, high-quality products, time efficiency, access to a wider range of materials and designs, and diversification of the supply chain. With the kitchen cabinets market in the USA becoming increasingly competitive, importing from Vietnam is an option that many companies are considering in order to gain a competitive edge.

# WHY YOU SHOULD IMPORT FROM OWEN CABINETS

WE ARE ONE OF THE LARGEST AND MOST MODERN KITCHEN CABINETS IN ASIA

Importing kitchen cabinets and butcher blocks from Vietnam can be more tax-effective for a USA company than importing from China due to the difference in trade agreements and tax policies between the two countries. Vietnam is a member of the Comprehensive and Progressive Agreement for Trans-Pacific Partnership (CPTPP), which offers preferential tariffs and reduced trade barriers for member countries, including the USA. Under the CPTPP, USA companies importing kitchen cabinets from Vietnam can benefit from reduced tariffs, which can result in significant cost savings. Additionally, Vietnam has a Bilateral Trade Agreement with the USA, which further promotes trade and investment between the two countries. In contrast, the USA has imposed tariffs on a wide range of products imported from China due to trade disputes between the two countries. The ongoing US-China trade war has resulted in the imposition of tariffs on billions of dollars worth of goods, including kitchen cabinets. As a result, importing kitchen cabinets from China can result in higher costs for USA companies due to the tariffs imposed on these products.

Furthermore, importing kitchen cabinets from China can result in higher import duties due to the classification of the product. The Harmonized Tariff Schedule (HTS) is used to classify goods imported into the USA, and the duty rate applied is determined by the HTS code. The HTS code for kitchen cabinets from China may be subject to higher import duties due to the country of origin, while the same product imported from Vietnam may be classified differently, resulting in lower import duties.

In conclusion, importing kitchen cabinets from Vietnam can be more tax-effective for a USA company than importing from China due to the difference in trade agreements and tax policies between the two countries.

USA companies can benefit from reduced tariffs and import duties when importing from Vietnam, while importing from China may result in higher costs due to tariffs and higher import duties. As a result, many USA companies are turning to Vietnam as a cost-effective alternative to China for importing kitchen cabinets.
